Set the mood

Highlight Your Decor

Create a memorable lighting experience for your guests

Intelligent Lighting Packages

WHAT IS INTELLIGENT LIGHTING? Intelligent lighting is steps above your normal DJ lighting. A highly trained lighting technician controls the lighting by a computer software program. The lighting designer can control the patterns, speed, and color. The abilities of intelligent lighting go far beyond that of ordinary lighting and are only limited by the users imagination. Intelligent lighting is the type of lighting you would see at nightclubs and concerts.

WHAT MAKES OUR LIGHTING DIFFERENT?

- The Ashford Estate uses LED technology
- All of our intelligent lights are installed fixtures of the estate
- The installed lighting will not block sight lines
- You will not come across stands that can be dangerous trip hazards
- The location of the lighting fixtures are customized to the estate
- Other Halogen-based lighting companies limit themselves to plastic sheets of colored paper they lay over their lighting units, limiting you to a small selection of colors.

Lighting Terms

LED: Light Emitting Diodes (LED) are the latest in event lighting. They emit virtually no heat, have very saturated and deep colors and they can recreate just about any color you desire.

UPLIGHTING: Brilliant columns of LED light highlight the columns architectural details. The colors can be matched to coordinate with your wedding colors.

TABLE PINSPOTTING: Focused beams of light create a focal point on the table arrangements and wedding cake.

GOBO LIGHTS: Projection of a design and patterns such as a monogram.

FOLLOW SPOT LIGHTING: Computerized focused iris that can follow the wedding party during introductions, the bride and groom's first dance, and spot light speakers for toasts and speeches.

AMBIENT ROOM LIGHTING: LED lighting that will completely "wash" the floor, ceiling or walls with customized color to set just the right mood for you and your guests. Ambient Room Lighting can be "static" or "transitional". Static Ambient Room Lighting is one set color the entire event. Transitional Ambient Room Lighting changes with the timeline of the event.

The Ashford Estate
